(a) Putinar module, zeros at a vertex
(with the product g1 g2: exact, < 1e-8)
f* d - lambda_{d,n}
relaxation order n
slope -2
slope -4
sq-corner, d=2
sq-corner, d=4
sq-edges, d=1
box-edges ([-1,1]^2 of §3.6), d=1
floor 1e-8
(b) positive control: [-1.5,1.5] described
by (2.25-x^2)^3 >= 0 only (Stengle)
0.07 range(P)/n^2
d=1
d=3
d=6
relaxation order n
(c) combined error along d(n)
(reliable brackets only)
|f* - lambda_{d(n),n}|
box-camel
disk-camel
sq-corner
sq-mix
1/n^2
relaxation order n, with d = d(n) of R3
